# Engineering led Approach

An engineering led approach allows Octavius to simplify, interpret and transform real world problems into effective solutions.

Octavius

We meet engineering challenges head on with innovation breakthroughs.

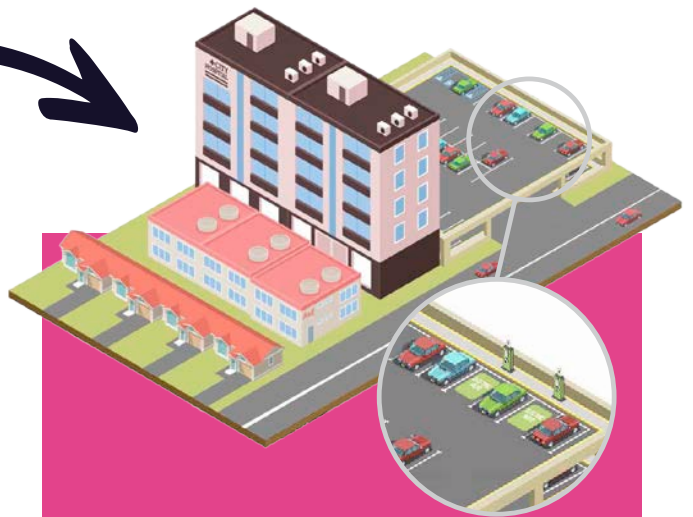

At Octavius, we draw upon our impressive portfolio of multi-modal transport hubs and car parking solutions to help shape the design and delivery of infrastructure solutions.

We focus on solving problems with the least effort in the most scalable way.

In collaboration with modular car park specialist Siderpark, we have developed a solution to free up land by reducing the space required for parking without losing capacity, by adding an extra deck onto your existing car parks, using a foundationless, modular design.

Our greener car park solution also includes sustainable energy sources and EV charging points, and the ability to recycle and re-use the structure in new locations in future.
